

EcoHX™ LED Floodlights

EcoHX™ LED Floodlights are ideal for illuminating large outdoor spaces. They are available in several wattages with Slip-Fitter brackets for replacing pole-mounted H.I.D. fixtures, or U-brackets for mounting to vertical, horizontal or angled surfaces. Dusk-to-dawn control is as simple as replacing the included shorting cap with a photocell (sold separately).

EcoHX™ LED Slip-fitter and U-bracket Floodlights include lenses that effectively manage light distribution and provide wide-area illumination while minimizing glare and outdoor light pollution. This makes them perfect for use in parking areas, as street lights, or in any application requiring high-quality pole-mounted fixtures.

Hawkeye Xtreme™ LED Floodlights

Hawkeye Xtreme™ LED Floodlights are the only wide-area fixtures to incorporate our exclusive Diamond Crystal™ Lens technology. **Hawkeye Xtreme™ LED Floodlights** provide bright, even lighting over large areas, indoors or outdoors, at any mounting height. No other fixture can match the efficiency and light management capabilities of the **Hawkeye Xtreme™**. They are available in several wattages with multiple mounting and control options for use indoors or outdoors. **Hawkeye Xtreme™ LED Floodlights** are ideal for playing fields, arenas, factories, warehouses, showrooms and more. U-brackets and hook and eye mounting systems are included.

All EcoHX™ LED Floodlights are made with longevity and economy in mind. Their 70,000+ hour user life and modular construction results in low maintenance costs. High-efficiency drivers and fanless, no-ballast design yields energy savings of up to 80% over H.I.D. lighting systems. These units operate at 120-277 volt input and are warranted for 60 months. Each unit is shipped with a watertight reusable connector to facilitate easy installation and maintenance.
