

HXL 05.06 LED Tube Replacement – Read before starting installation!

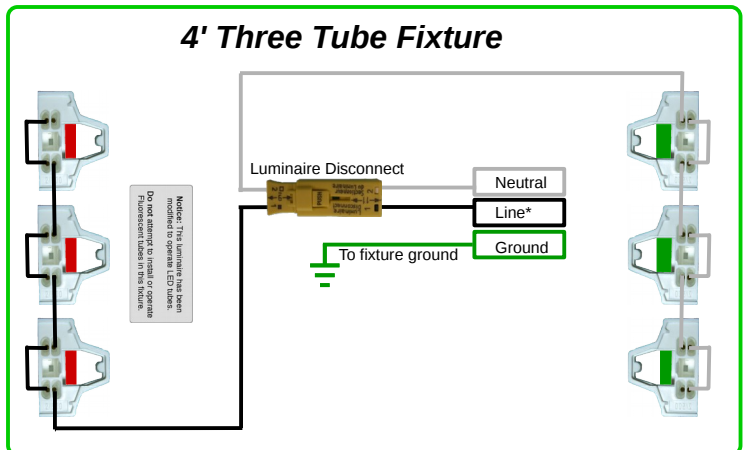

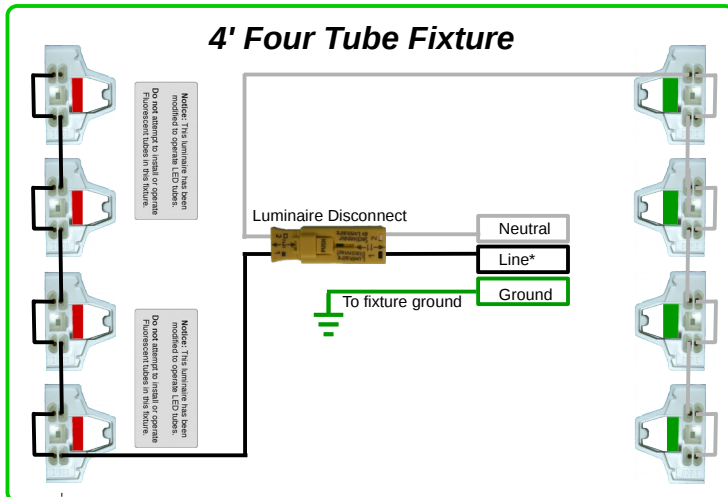

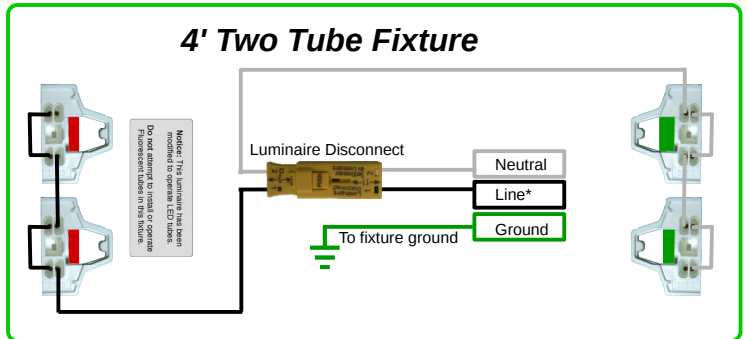

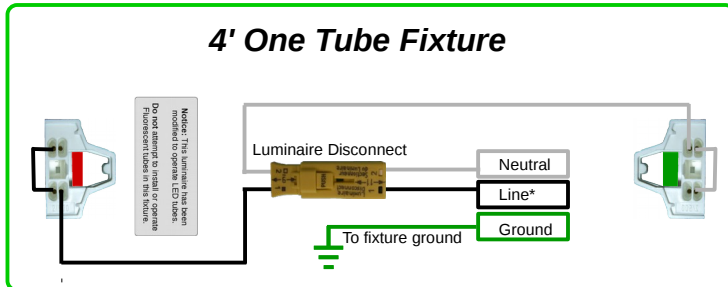

WARNING! - Consult an electrician if you are unsure of any of the following instructions.

Risk of fire – Supply wires must be rated 90°C or greater.

Risk of death – Disconnect power at fuse or breaker panel before attempting any electrical work.

Installation:

- Verify that there is no power on the circuit
- Remove old tubes and disassemble fixture.
- Disconnect ballast from line inputs and sockets.
- Remove tube sockets and ballast.
- Connect incoming AC wires to input side of **Luminaire Disconnect**
- Connect neutral wire from **Luminaire Disconnect** to **GREEN** sockets and install sockets.
- Connect line wire from **Luminaire Disconnect** to **RED** sockets and install sockets.
- Ensure ground connection (green or bare wire) is secured to fixture.
- Reassemble fixture.
- Affix **LED Conversion Notice Sticker(s)**¹ on the deflector as indicated below.
- Install compatible LED tubes² observing proper orientation and **polarity**.
- Restore power and test.

* **ECOHX LED Tubes** can be used with input voltages ranging from 120 to 277 VAC. *Pre-wired fixture conversion kits are available.*

¹ The supplied **LED Conversion Notice Stickers** must be applied to the fixture reflectors as indicated in the diagrams.

Notice: This luminaire has been modified to operate LED tubes.
Do not attempt to install or operate Fluorescent tubes in this fixture.

² Compatible tubes include **ECOHX LX84LV17, LX84LV12 and LX84LV9** series Type B Double-end tubes. **ECOHX** Type B Double-end tubes are **UL Certified**, include **anti-shock technology** for safe installation, and feature all glass construction to eliminate sagging and discoloration due to age. Each is available in *EXP, Outdoor, Cool* and *Natural* color.
